CLAIMS

What is claimed is new and desired to be protected by letters Patent is set

forth in the appended claims:

1. A computer software program for capturing the HTTP commands generate

by a user through a web browser to a remote web server, the program

comprising :

> a) capturing HTTP commands;
>
> b) storing HTTP commands;
>
> c) retrieving HTTP commands; and
>
> d) transmitting HTTP commands.

2. The system of claim 1, wherein said capturing HTTP commands includes

processing for transcribing HTTP commands.

3. The system of claim 1, wherein said storing HTTP commands includes

processing for recording the HTTP commands to a storage media.

4. The system of claim 1, wherein said retrieving HTTP commands includes

processing for retrieving HTTP commands from a storage media.

Deming, Doc.No. DD-2, 12 February 2001

5. The system of claim 1, wherein said transmitting HTTP commands includes

processing for transmitting HTTP commands to the TCP/IP handler.

6. A computer software program having means for capturing the HTTP

commands generate by a user through a web browser to a remote web server,

the program comprising :

> a) means for capturing HTTP commands;
>
> b) means for storing HTTP commands;
>
> c) means for retrieving HTTP commands; and
>
> d) means for transmitting HTTP commands.

7. The system of claim 6, wherein said means for capturing includes processing

means for transcribing HTTP commands.

8. The system of claim 6, wherein said means for storing includes

processing means for recording the HTTP commands to a storage media.

9. The system of claim 6, wherein said means for retrieving includes processing

means for retrieving HTTP commands from a storage media.

Deming, Doc.No. DD-2, 12 February 2001

10. The system of claim 6, wherein said means for transmitting includes processing means for transmitting HTTP commands to the TCP/IP handler.

11. A HTTP-API method consisting of an interactive computer based program for recording HTTP commands between a client-side web browser and a web server.

12. The method of claim 11 further comprising processing means for storing the client-side web browser and web-server HTTP commands on a storage media.

13. The method of claim 11 further comprising processing means for retrieving an entity of HTTP session commands from a storage media.

14. The method of claim 11 further comprising processing means for transmitting an entity of HTTP session commands from a storage media.

15. A computer software program system that modifies a client-side trading system that modifies a client-side trading system output to market orders that are transmitted to a remote broker site, the program comprising:

    a) means for capturing stock orders;

    b) means for modifying stock orders;

c) means for updating transaction records; and

d) means for transmitting market orders.

16. The system of claim 15, wherein said means for capturing stock orders includes processing means for seizing trading system transaction records.

17. The system of claim 15, wherein said means for modifying stock orders includes processing means for editing trading system transaction records.

18. The system of claim 15, wherein said means for updating stock orders includes processing means for changing trading system transaction records.

19. The system of claim 15, wherein said means for transmitting market orders includes processing means for establishing a telecommunications link with a remote stockbroker system for the purpose of transmitting transaction records to said remote site.

20. A computer software program system that modifies a client-side trading system that modifies a client-side trading system output to market orders that are transmitted to a remote broker site, the program comprising:

a) means for capturing stock orders;

Deming, Doc.No. DD-2, 12 February 2001

b) means for modifying stock orders;

c) means for updating transaction records; and

d) means for transmitting market orders.

21. The system of claim 201, wherein said means for capturing stock orders includes processing means for seizing trading system transaction records.

22. The system of claim 20, wherein said means for modifying stock orders includes processing means for editing trading system transaction records.

23. The system of claim 20, wherein said means for updating stock orders includes processing means for changing trading system transaction records.

24. The system of claim 20, wherein said means for transmitting market orders includes processing means for establishing a telecommunications link with a remote stockbroker system for the purpose of transmitting transaction records to said remote site.

25. A computer software program that can be selectively initiated by a user that will act as an interface between a client-side trading system and a server-side trading system.

Deming, Doc.No. DD-2, 12 February 2001

26. The computer software program of claim 25, having modified prerecorded HTTP commands for executing functions on a server-side trading system.

27. The computer software program of claim 25, having computer programming code for querying the user of said software for parameter information for completing the embedded HTTP commands.

28. The computer software program of claim 25, having computer programming code for modifying the output of a client-side trading system.

29. The computer software program of claim 25, having computer programming code for querying a user as to selected modifications to be made to the client-side trading system output data.

30. The computer software program of claim 25, having computer programming code for interfacing with a server-side trading system.

Deming, Doc.No. DD-2, 12 February 2001
